EDUCATION

University of Florida - Gainesville, FL

May 2026

B.S. in Computer Science & Minor in Statistics

GPA: 3.94/4.0

- **Relevant Coursework:** Operating Systems, Data Structures & Algorithms, Computer Arch. & Org., Discrete Structures, AI in Computer Games, Intro to Software Engineering, Programming Data in R.
- **Honors & Awards:** Honors Program, Florida Academic Scholar, Franklin Merit Scholar, Sahakian Scholar, Collins Engineering Scholar, President's List, Dean's List.

EXPERIENCE

Cloud Engineer Intern ♦ *Florida Blue, A GuideWell Company*

Aug. 2025 – Present

- Built and integrated custom **AVM modules for Splunk and Wiz**, extending centralized logging/security into **lab and production Azure environments**, improving monitoring coverage by **35%**.
- Enhanced **AWS Resource Explorer** by implementing a delegated multi-account aggregation model, providing unified visibility across **30+ AWS accounts** and reducing resource discovery time by **40%**.
- Developed a **Python automation script** to extract Azure managed identities and map them to associated role assignments and policies by parsing **Terraform state files** and performing **Azure API queries**, exporting assignment IDs, application IDs, names, and locations into a unified **CSV catalog** for governance teams.

Software Engineer Intern ♦ *Florida Blue, A GuideWell Company*

May 2025 – Aug. 2025

- Executed **user stories** in Agile sprints, collaborating with engineers to build and test production-ready features impacting **9,000+ employees** and **millions of customers**.
- Resolved a backend timeout issue in the **Enterprise Workcenter** tool by optimizing both the **Spring Boot API layer** and its **React frontend** interaction patterns, reducing repeated API calls by **75%** and preventing duplicate task assignments across the organization.
- Upgraded the **Elasticsearch, Logstash, and Kibana (ELK) consumer** from **Java 17** to **Java 21**, and implemented **RACF**-based validation logic to eliminate employee status conflicts when identical names existed within the same group.

Lead Front-End Developer ♦ *UF Society of Asian Scientists and Engineers*

Feb. 2024 – May 2025

- Partnered with a web development team to design and develop the UI for a new website serving **1,000+** members, resulting in a **73%** increase in user engagement compared to the previous version.
- Implemented **6+** key pages, including the navigation bar, about, board, and programs pages, leveraging **Figma, TypeScript, React**, and **Tailwind CSS**.
- Led team meetings and coordinated development tasks in weekly standups, leveraging **Agile** and **CI/CD** workflows with **Vercel** testing. Reviewed and merged front-end pull requests while contributing **6,000+** lines of code.

Software Engineer Intern ♦ *CourseLynx*

May 2024 – Aug. 2024

- Resolved a critical bug in the **Flutter** application using **Dart**, reducing chat load times by **90%** for newly added courses, impacting **thousands of users** and eliminating the need for app restarts.
- Engineered a chat message caching system using a **Hive** database, optimizing the loading time for over **10,000** messages, and improving performance by **80%**.
- Developed and implemented a real-time user tagging feature in chat rooms, designing a dynamic UI for user tag lists that enhanced search efficiency, leading to a **27%** increase in user growth.

PROJECTS

BumbleBot | *Individual Project* | *University Tournament 1st Place* | *C#, Robocode (Open-Source), FSM*

- Developed an AI-driven Robocode bot in **C#** using **finite state machine** design, achieving a **70%** win rate against the AI benchmark bot and implementing strategies for real-time decision-making and predictive targeting.
- Engineered complex behaviors like wall avoidance and energy-based firing, with event-driven programming, leading to a **55%** improvement in hit accuracy and a **40%** increase in evasion success.

WAD Filesystem | *Individual Project* | *C++, FUSE, Linux*

- Implemented critical filesystem operations including getattr, read, readdir, write, mknod, and mkdir in a **FUSE-based** environment, enabling seamless interaction with WAD archives.
- Designed an n-ary tree structure to model WAD archive contents, supporting efficient directory traversal and real-time access to **10,000+ descriptors**, achieving stable performance during **100+ file operations** in testing.

TECHNICAL SKILLS

Languages: Python, C/C#/C++, Java, JavaScript, TypeScript, SQL, Dart, R, HTML/CSS, HCL.

Frameworks/Tools: React, Vite, Node.js, Tailwind CSS, Material-UI, Electron, Flutter, Terraform, AWS Services, Azure, Git.
